Downpour are proud to release their new MO-2500 litre Supa-Slimline poly tank.

DOWNPOUR
fresh water solutions

The unique design of the Supa-Slimline is ideal for tight spaces. Only 620mm wide and 2200mm high, Supa-Slimline fits beautifully under eaves and in very narrow spaces. Super Slim's four chamber design and mini-orb profile makes a stylish and

contemporary water feature. All poly tanks by Downpour are renowned for their strength and durability and are available in an extensive range of fashionable colours.

SUPA-SLIMLINE MO-2500

Downpour and Davey A Great Team

Over the past 15 years, Downpour and parent company Wet Technologies have forged a strong partnership with Australia's leader in water pump technology – Davey Water Products.

The Supa-Slimline has been designed by Wet Technologies in conjunction with the engineering

division of Davey Water Products. Supa-Slimline's unique construction has been developed specifically to accommodate Davey's all new, award winning, water saving RainBank® system.

New RainBank – The next generation in Water Saving technology

RainBank® is an automatic controller for rainwater harvesting.

RainBank® controls the water supply for toilet or laundry applications by automatically switching the water source from the domestic mains to rainwater when a demand is sensed and rainwater is available in the storage tank.

RainBank® can save up to 40% of a household's water supply which is normally used in these applications, thereby helping conserve Australia's precious water resources.
